Fuel Sources and Air Emission to Generate Your Electricity for Verde Energy USA New York, LLC—VERDE - 2023 January 1, 2023–December 31, 2023

| el Sources       |                                  |
|------------------|----------------------------------|
| Biomass          | < 1 %                            |
| Coal             | < 1 %                            |
| Hydroelectric    | 58 %                             |
| Natural Gas      | 22 %                             |
| Nuclear          | 10 %                             |
| Oil              | < 1 %                            |
| Renewable Biogas | < 1 %                            |
| Solar            | < 1 %                            |
| Solid Waste      | < 1 %                            |
| Wind             | 9 %                              |
| Total            |                                  |
|                  | ghtly from 100% due to rounding) |

Note: Sulfur dioxide and nitrogen oxides are key pollutants that contribute to acid rain and smog, and carbon dioxide, contributes to global climate change. Depending on fuel source, size, and location, the generation of electricity may also result in other public health, environmental and socio-economic impacts not disclosed above.

This label displays information on the electricity provided to all customers of this entity. If necessary, product specific labels can be generated by the entity.
