Electric Car Sales: Nearing the Inflection Point

Let's invest in Battery Technology

- DETROIT (Reuters) - Ford Motor Co's plan to double its electrified vehicle spending is part of an investment tsunami in batteries and electric cars by global automakers that now totals \$90 billion and is still growing.
- Reuters analysis shows. \$19B US, \$21B China, \$52B Germany That money is pouring in to a tiny sector that amounts to less than 1 percent of the 90 million vehicles sold each year and where
- Elon Musk's Tesla Inc, with sales of only three models totaling just over 100,000 vehicles in 2017, was a dominant player.

The Car of the Future (on the market now)

The car of the present: for all of us!

Full Electric Vehicle: Chevy Bolt, Kia Niro, Tesla, VW eGolf, *Hyundai Ioniq*, Hyundai Kona, Nissan Leaf, Rivian

The Soul of Every Tesla

Model X is a family vehicle with performance roots. The Tesla Vehicle Platform enables Model X to perform in ways never expected from a car of its size. With a center of gravity lower than any other SUV, you'll notice nimble reflexes at every turn. The electric powertrain delivers instant torque for confident lane changes, even when loaded with seven adults and all their gear.

Dual Motor All-Wheel Drive

Model X is offered with optional Dual Motor All-Wheel Drive. The second motor enables more than all-weather, all-road capabilities: it increases torque by 50%. When outfitted with AWD, Model X Performance accelerates from 0 to 60 mph in less than 5 seconds, outperforming the fastest SUVs and many sports cars.

0-60 MPH IN UNDER 5 SECONDS

Future of Electric Vehicle: Rivian Skateboard

Rivian a new EV truck manufacturer out of Illinois. Making the platform for the Ford Mach-E, Lincoln Aviator and Rivian. Also Amazon invested over \$750M and placed orders for delivery trucks.
